

“

This area of business is increasingly taking its place as the impeller of the international activity

In the sector of Construction and Public Works, our challenge resides in a more qualified market at the expense of the more general works, thus seeking to avoid competition and the degradation of prices, aiming to obtain work contracts that require a greater technical expertise such as works of art, among other specialized sectors.

Building is one of our areas of excellence with almost six decades of know-how and experience.

Leveraging the proof given abroad and the knowledge acquired in the field of formwork in the markets of Germany and Belgium since 2002, we appear as a reference in the execution of structures, specially in european markets.

This area of business is increasingly taking its place as the impeller of the international of diferent companies associated with this activity and of the new business areas of the Casais Group, namely real estate, tourism, industry, environment and energy.

Constru is the new offer of Grupo Casais in the market of small scale works. We aim to satisfy the needs of our clients' and the market of smaller scale works, especially in the segments of renovation, conservation and renewal in the cities of Lisbon and Porto. With a more flexible structure, Constru benefits from the advantage of belonging to the Casais Group, from all the existing technical competence and from its access to competitive materials and solutions.
