

## ENGINEERING AND CONSTRUCTION

“

*This area of business is increasingly taking its place as the impeller of the international activity*

**T**his business area is the core of the Group's activity. Based in Braga, we are present in the field of construction for more than 60 years. We have started an internationalization process in 1994 and today we have 16 active markets. Our knowledge and experience have been recognized both by the preference of our clients and by the attribution of external merits.

Casais Engenharia was recently recognized as the Best Builder in Portugal by the Construir Awards for the second consecutive time.

Our focus is to maintain and strengthen the activity in the markets where we are installed and the relationship with the customer where there is a market. Our strengths are quality, timeliness, engineering expertise and customer proximity.

With the increasing introduction of technology across industries and segments, the impact on how we build will change. Therefore, we are giving priority to the process of Construction Digitisation, with a focus on the use of technology to improve performance and the chain of management. Also, the commitment to the development of the technical area of Engineering with the objective of creating price differentiation, bringing technical gains and more productive systems allows us not only to optimize cost but also to offer more value (quality and term).

We are the group with the largest integrated capacity for the building area. We believe that our future is based on three principles:

- 1) To generate value through the creation of built assets for our clients and the group through integration and industrial efficiency;
- 2) Develop and preserve a community of people who accompany our business;
- 3) Focus on Knowledge and Strategic Partnerships.

This is our offer and we look for clients who privilege our arguments and who allow us to present our added value and suggestions to ensure the best possible performance of buildings and built infrastructure.

**We Build Your Vision, because our keystone is our client.**

To foster a business model in a contractual collaboration with our clients, through multi-project contracts, with the purpose of participating from the design and conception phase of the product to the construction. Construction is an industry subject to many variables upstream and downstream which makes it more difficult to articulate a linear and efficient production flow. We believe that starting by building collaborative relationships with customers allows us to create the foundations for designing a more fluid and efficient production process.
