Ampere Energy launches Ampere T-Pro and Ampere E-Loop solutions

22.06.2020

The smart battery company has taken yet another step towards the new energy model, in terms of self-consumption, smart energy storage and electromobility. The new three-phase Ampere T-Pro batteries allow small industries or even large dwellings to store energy, and also provide an uninterruptible and constant power circuit. The new E-loop electric vehicle chargers allow you to discharge the energy from your electric vehicle to supply your home. This means that you can use the energy stored in your electric vehicle directly at home.
